Vocollect Light Industrial Solution

Extending Voice-Enabled Productivity

Vocollect's Light Industrial Solution is a voice-directed workflow solution for customers who want to significantly improve productivity and accuracy. This is a purpose-built, voice-only, wearable solution for DCs that do not deploy voice in freezers or extremely wet environments.

The Light Industrial Solution is based on the Vocollect Talkman® T1 and lightweight SL-4 headset along with Vocollect VoiceClient® software for superior speech recognition and VoiceConsole® for centralized device and configuration management.

The software and management platform for the solution are shared across Vocollect's other products. This reduces implementation cost for existing customers who add this solution to their operation.

Light Industrial Solution - Leverages Years of Experience

Vocollect's Light Industrial Solution is based on a platform that has provided years of successful use by hundreds of thousands of mobile workers worldwide. Vocollect designed the Light Industrial Solution for voice-only warehouse workflows such as selection, cycle-counting and put-to-store.

The Light Industrial Solution represents a reduced Total Cost of Ownership (TCO) because there is no screen or keypad on the T1. This eliminates the two items that most commonly break on conventional handheld devices.

Integrated Package

The behind-the-head SL-4 Vocollect Light Industrial Headset provides a comfortable fit while maintaining an approachable appearance for the wearer… perfect for employees who have other responsibilities throughout the day. It offers ease of use without compromising the speech recognition performance that is critical to delivering return-on-investment in voice applications.

Workers will appreciate the lightweight form factor; the behind-the-head orientation that doesn't interfere with glasses, hair styles or headwear; and the light weight cord that doesn't drag or get in the way. Both right and left ear models are available.

Easy to Operate

Modular and Space Saving

The Light Industrial Solution with Talkman T1 is also easy to use and store. The small multi-bay combination battery and terminal charger won't take up valuable operational space with cabling or require complex operating procedures.

The T1 Voice Appliance easily slips into and out of the charger. There is no need to remove its battery; workers in a hurry can simply drop the T1 in for a charge. However, there is also a slot in the front of each terminal charging bay to charge an additional battery for longer shifts or back-to-back shift operations.

Easy to Operate

Uses Existing Vocollect Software

As part of a family of products, the Talkman T1 is managed by Vocollect VoiceConsole - the same management agent that is used for all of the Talkman family.

The entire portfolio of existing warehouse management software (WMS) solutions is also available in addition to full Vocollect VoiceLink® support.

Customers who are already using Vocollect software will find that they can simply add the Talkman T1 to their operation without additional training. The new versions of software which support Talkman T1 will manage all existing products and have the same look and feel of the prior versions.

Vocollect Light Industrial Solution	
Vocollect Software	
Terminal Software	VoiceClient 3.7
Terminal Management Software	VoiceConsole 3.2
Run Processes	Tasks
Talkman Voice Appliance	**Talkman T1**
